# 1. Introduction

## 1.1. About the Project

eBay is an online marketplace where individuals and businesses can buy and sell a wide variety of goods and services worldwide. The site allows users to post items for sale, and buyers can browse the listings and purchase items they're interested in. The site provides a wide range of features and tools to make buying and selling as easy as possible, including search and filtering options, detailed product information, and secure payment options. As part of the test project, we utilized Selenium to automate tasks such as navigating the site, inputting data into forms, and interacting with different page elements in order to ensure that the site is functioning correctly and that the user experience is optimal.

## 1.2. Project Functionalities and Screenshots

Our project focuses on testing the functionality and user experience of the ebay.com website using Selenium and Java. Some of the main features of our project include:

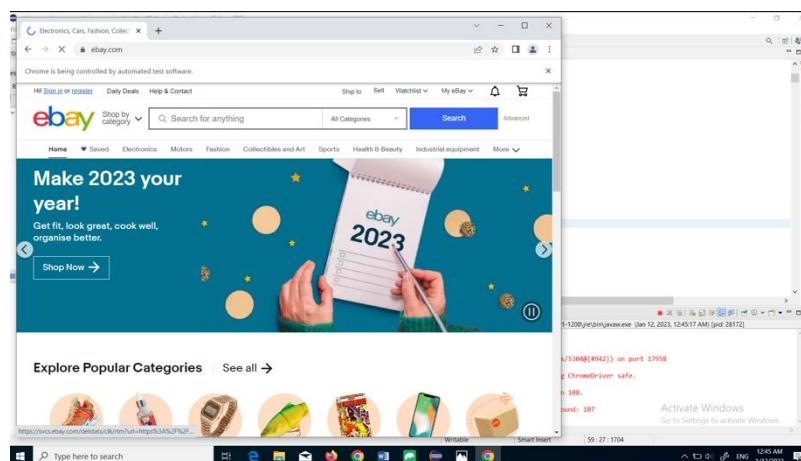

-Automating navigation of the site: We used Selenium's built-in web browser automation capabilities to navigate around the site and interact with different pages, forms, and buttons, as a user would.

-Verifying the correct functioning of various site elements: This includes testing that links and buttons are working correctly, that forms are properly handling input and displaying error messages, that search results are returned as expected and that products and details displayed correctly, and so on.

-Ensuring optimal user experience: Our tests include checks to make sure that the site is loading quickly, that it is easy to use and navigate, and that it is free of errors and other issues that might disrupt the user experience.

## Buying as a guest

2 min article

You can shop for most things on eBay without needing an eBay account, but you'll miss out on the benefits of being a member.

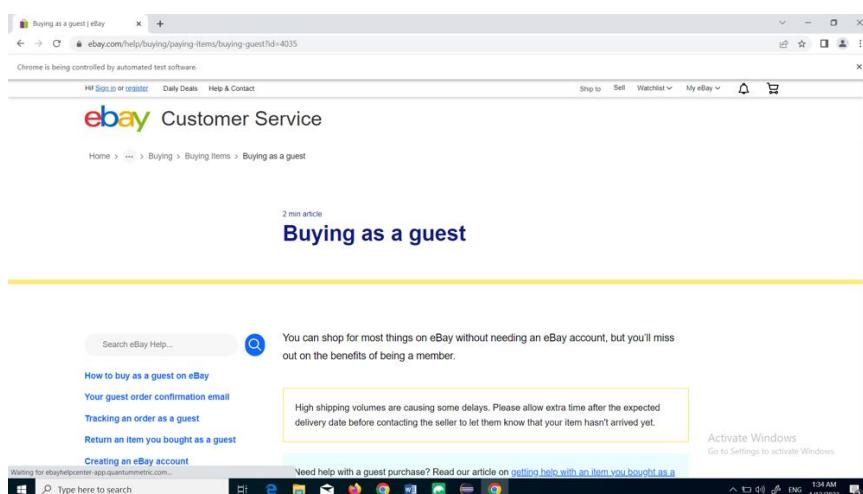

How to buy as a guest on eBay Your guest order confirmation email Tracking an order as a guest Return an item you bought as a guest Creating an eBay account

High shipping volumes are causing some delays. Please allow extra time after the expected delivery date before contacting the seller to let them know that your item hasn't arrived yet.

How to buy as a guest on eBay Your guest order confirmation email Tracking an order as a guest Return an item you bought as a guest Creating an eBay account

Tip You can use your Facebook, Google, or Apple account to quickly sign up for an eBay account. Learn more about using your social accounts to sign up on eBay.

Top Takeaway You can usually buy on eBay without an account if the item is selling for less than \$5,000 and it's offered with Buy It Now. You need an eBay account to bid on an auction item.

Discussions - The eBay Community

community.ebay.com/t5/Discussions/ct-p/12001

Chrome is being controlled by automated test software.

The eBay logo is at the top left. A navigation bar includes Seller News, Buying & Selling, Product Categories, Seller Groups, Community Info, Events, and Podcasts. Below the navigation is a purple banner with the word 'Discussions'. It features a search bar with 'All Content' and a magnifying glass icon. A 'Start a conversation' button is also present. To the right is a video player showing a woman in a yellow sweater and a man in a brown jacket, both wearing headphones and smiling. The video has a play/pause button and navigation arrows. Below the video is the text 'The eBay for Business Podcast' and 'Everything you need to know for your eBay business. New episodes weekly!'. The bottom of the page shows a breadcrumb trail: eBay Community > Archived boards and groups 12.2022 > Read Only Archive > Discussions. There is also an 'Options' dropdown menu.

Activity in Discussions

Sorted by: Most recent

Type here to search

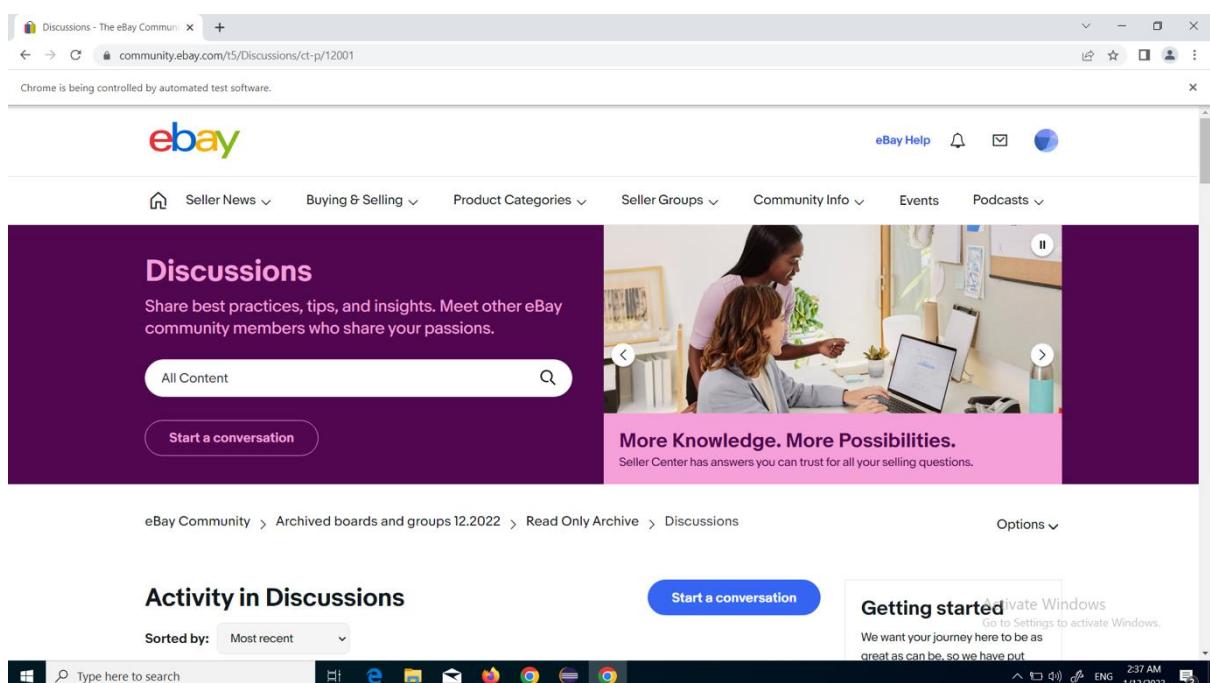

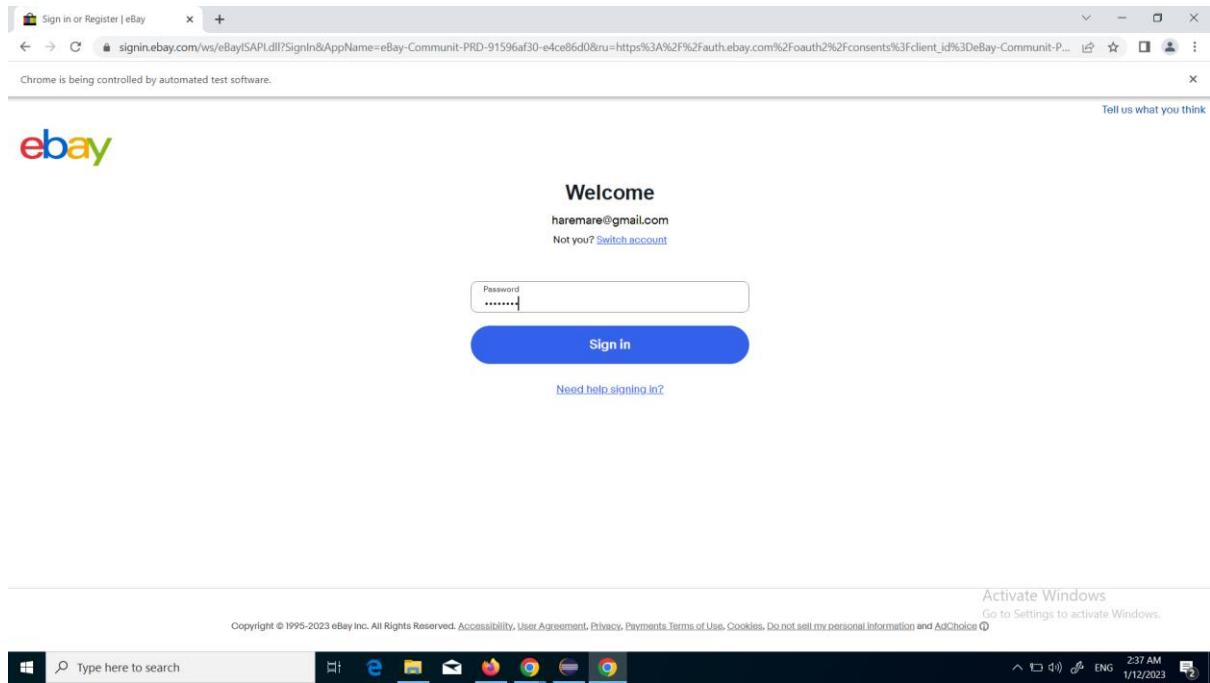

A 'Start a conversation' button is visible. On the right, there is a 'Getting started' section with a link to 'Activate Windows'. The bottom of the page shows a Windows taskbar with icons for File Explorer, Edge, Mail, and other applications. The date and time are shown as 1/12/2023 2:36 AM.

Chrome is being controlled by automated test software.

The eBay logo is at the top left. The main heading is 'Hello' with a 'Sign in to eBay or create an account' link. Below is a text input field with 'haremare@gmail.com' typed in. A blue 'Continue' button is next to it. A horizontal line with 'or' follows. Below are three social media login buttons: 'Continue with Facebook', 'Continue with Google', and 'Continue with Apple'. A checkbox for 'Stay signed in' is checked, with a note about using a public or shared device. A 'Learn more' link is provided. On the right, there is an 'Activate Windows' section with a link to 'Go to Settings to activate Windows'. The bottom of the page shows a Windows taskbar with icons for File Explorer, Edge, Mail, and other applications. The date and time are shown as 1/12/2023 2:37 AM.

## 2. Test Execution

### 2.1. Example Scenario: Test URL

We want to test if the URL is the one that is represented on the landing page.

<b>Test Name:</b> Test URL				
<b>Description:</b> Check if we have the right URL				
<b>Pre-condition(s):</b>				
<b>Test Steps:</b>  1. Go to the landing page 2. Check if our URL is equal to the landing page's URL	<b>Test Data:</b>	<b>Expected Result:</b> If our URL is equal to landing's page URL, print it.	<b>Actual Result:</b> Actual result is same as expected result.	<b>Status:</b> <b>PASS</b>
<b>Notes:</b>				

The screenshot shows the Eclipse IDE interface with the following details:

- Project Explorer:** Shows several Java files like `ba.ibedu.intro`, `Error`, `heap_sort`, etc.
- SeleniumProject.java (selected):** Contains Java code for a Selenium test. It includes annotations for `@BeforeAll`, `@BeforeEach`, and `@AfterEach`. It sets up a web driver to point to `https://www.ebay.com/` and performs basic assertions about the current URL.
- Console:** Displays terminal output related to the Selenium setup and a warning about an old ChromeDriver version.
- Taskbar:** Shows standard Windows taskbar icons like File Explorer, Task View, Start, Taskbar settings, and system status.

## 2.2. Example Scenario: Test Business Account

During the testing of business account, we focused on ensuring that the process is working correctly and that all necessary information is being collected and stored properly.

Test Name: Test Business Account				
Description: Check if the user can create business account				
Pre-condition(s):				
<b>Test Steps:</b> <ol style="list-style-type: none"><li>1. Go to the landing page</li><li>2. Click on the register button</li><li>3. Click on Create Business Account</li><li>4. Fill the form</li><li>5. Create Account</li></ol>	<b>Test Data:</b>	<b>Expected Result:</b>	<b>Actual Result:</b>	<b>Status:</b>
		When we fill out the form, user account will be created.	When we fill out the form, user account will be created.	PASS
<b>Notes:</b> There are a lot of captcha(s).				

The screenshot shows the Eclipse IDE interface with the code editor open. The project is named 'SeleniumProjectJava'. The class is named 'projectTestJava'. The code is as follows:

```
// 2nd test, create a business account
@Test
void createTest() throws InterruptedException {
    webDriver.get(baseUrl);
    webDriver.manage().window().maximize();
    Thread.sleep(1000);
    Thread.sleep(10000);

    // Click on the Create Account Button
    webDriver.findElement(By.xpath(
        "/html/body/header/div[1]/li[1]/span/span/a")).click();
    Thread.sleep(2000);

    Thread.sleep(30000);

    webDriver.findElement(By.xpath(
        "/html/body/div[2]/div[3]/div[1]/fieldset/span[2]/span[1]/span/input")).click();
    Thread.sleep(2000);

    webDriver.findElement(By.xpath(
        "/html/body/div[2]/div[3]/div[4]/form/div[1]/span/span[1]/span/input")).click();
    Thread.sleep(2000);

    webDriver.findElement(By.name("businessName")).sendKeys("Mirsad");
    webDriver.findElement(By.name("businessEmail")).sendKeys(
        "mirsad.hadzic.66666666@gmail.com");
    webDriver.findElement(By.name("bizPassword")).sendKeys("ocu366m8");
    Thread.sleep(2000); Thread.sleep(3000);

    Select country = new Select(webDriver.findElement(By.id("businessCountry")));
    country.selectByVisibleText("Bosnia and Herzegovina"); Thread.sleep(2000);

    webDriver.findElement(By.xpath(
        "/html/body/div[2]/div[3]/div[4]/form/span/span/input")).click();

    Thread.sleep(1000);

    webDriver.findElement(By.xpath(
        "*//button[@type='submit'][contains(text(), 'Create Account')]")).click();
}
```

The status bar at the bottom shows 'Activate Windows' and 'Go to Settings to activate Windows.'

The screenshot shows the Eclipse IDE interface with the code editor open. The project is named 'SeleniumProjectJava'. The class is named 'projectTestJava'. The code is as follows:

```
Thread.sleep(1000);
Thread.sleep(10000);

// Click on the Create Account Button
webDriver.findElement(By.xpath(
    "/html/body/header/div[1]/li[1]/span/span/a")).click();
Thread.sleep(2000);

Thread.sleep(30000);

webDriver.findElement(By.xpath(
    "/html/body/div[2]/div[3]/div[1]/fieldset/span[2]/span[1]/span/input")).click();
Thread.sleep(2000);

webDriver.findElement(By.xpath(
    "/html/body/div[2]/div[3]/div[4]/form/div[1]/span/span[1]/span/input")).click();
Thread.sleep(2000);

webDriver.findElement(By.name("businessName")).sendKeys("Mirsad");
webDriver.findElement(By.name("businessEmail")).sendKeys(
    "mirsad.hadzic.66666666@gmail.com");
webDriver.findElement(By.name("bizPassword")).sendKeys("ocu366m8");
Thread.sleep(2000); Thread.sleep(3000);

Select country = new Select(webDriver.findElement(By.id("businessCountry")));
country.selectByVisibleText("Bosnia and Herzegovina"); Thread.sleep(2000);

webDriver.findElement(By.xpath(
    "/html/body/div[2]/div[3]/div[4]/form/span/span/input")).click();

Thread.sleep(1000);

webDriver.findElement(By.xpath(
    "*//button[@type='submit'][contains(text(), 'Create Account')]")).click();
}

```

The status bar at the bottom shows 'Activate Windows' and 'Go to Settings to activate Windows.'

## 2.3. Example Scenario: Test Personal Account

During the testing of personal account, we focused on ensuring that the process is working correctly and that all necessary information is being collected and stored properly.

Test Name: Test Personal Account				
Description: Check if the user can create personal account				
Pre-condition(s):				
Test Steps:	Test Data:	Expected Result:	Actual Result:	Status:

1. Go to the landing page 2. Click on the register button 3. Click on Create Personal Account 4. Fill the form 5. Create Account	When we fill out the form, user account will be created.	When we fill out the form, user account will be created.	PASS
--	--	--	------

**Notes:** There are a lot of captcha(s). There are a lot of captcha(s). Maybe you need to enter another email address and rest of information, because I've probably used this one.

```

}
/*
// 4th test, click on the Help & Contact link/button

```

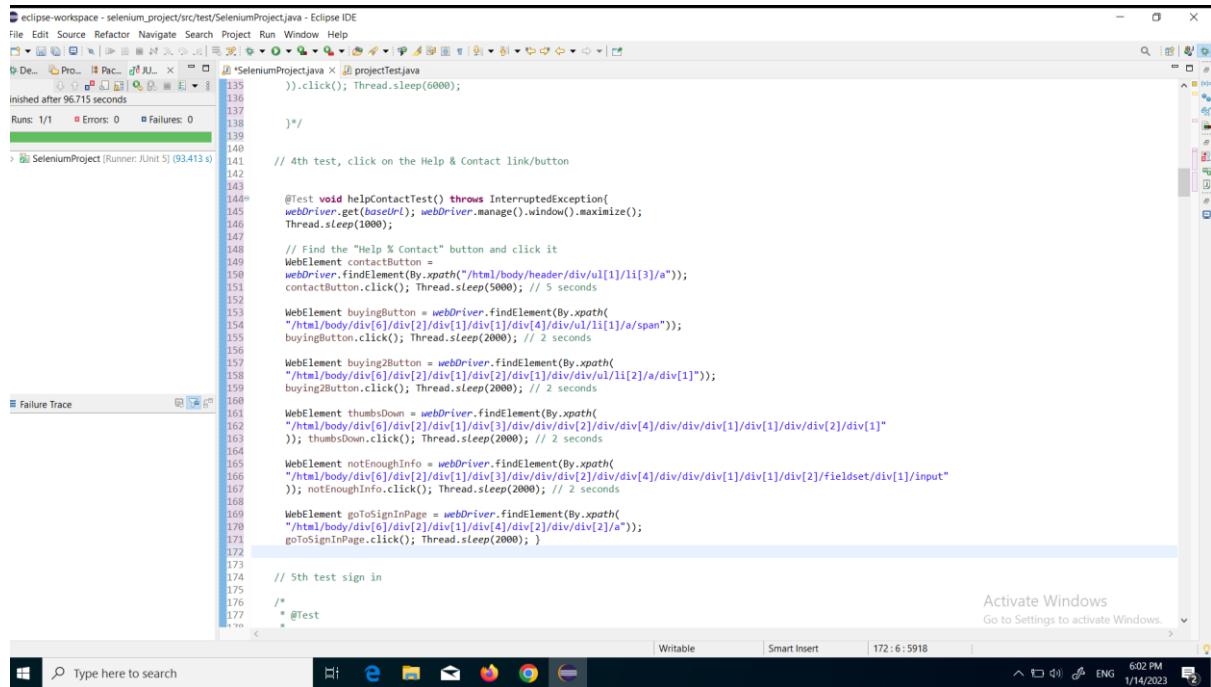

## 2.4. Example Scenario: Test Help & Contact Link/Button

When testing the Help & Contact link or button on ebay.com, we focused on ensuring that it is easily accessible and that it leads users to the correct page where they can find help and contact information and to leave a dislike.

Test Name: Test Help & Contact Link/Button				
Description: Check if the user can navigate through Help as guest and leave a dislike (similar to feedback)				
Pre-condition(s):				
<b>Test Steps:</b> 1. Go to the landing page 2. Click on Help & Contact Button 3. Click on Buying as a guest	<b>Test Data:</b>	<b>Expected Result:</b> Navigate through Help & Contact button and leave a dislike.	<b>Actual Result:</b> Navigate through Help & Contact button and leave a dislike.	<b>Status:</b> PASS

- |   |  |  |  |
|---|--|--|--|
| 4. When redirected to next page, click on Buying as a guest<br>5. When redirected to next page, try to leave a dislike as a feedback<br>6. Click on “Not Enough Info” when asked why you leave a dislike<br>7. Go to sign in page |  |  |  |
|---|--|--|--|

**Notes:**

171   goSignInPage.click(); Thread.sleep(2000); }
172
173
174 // 5th test sign in
175
176 /*
177 * @Test
    
```

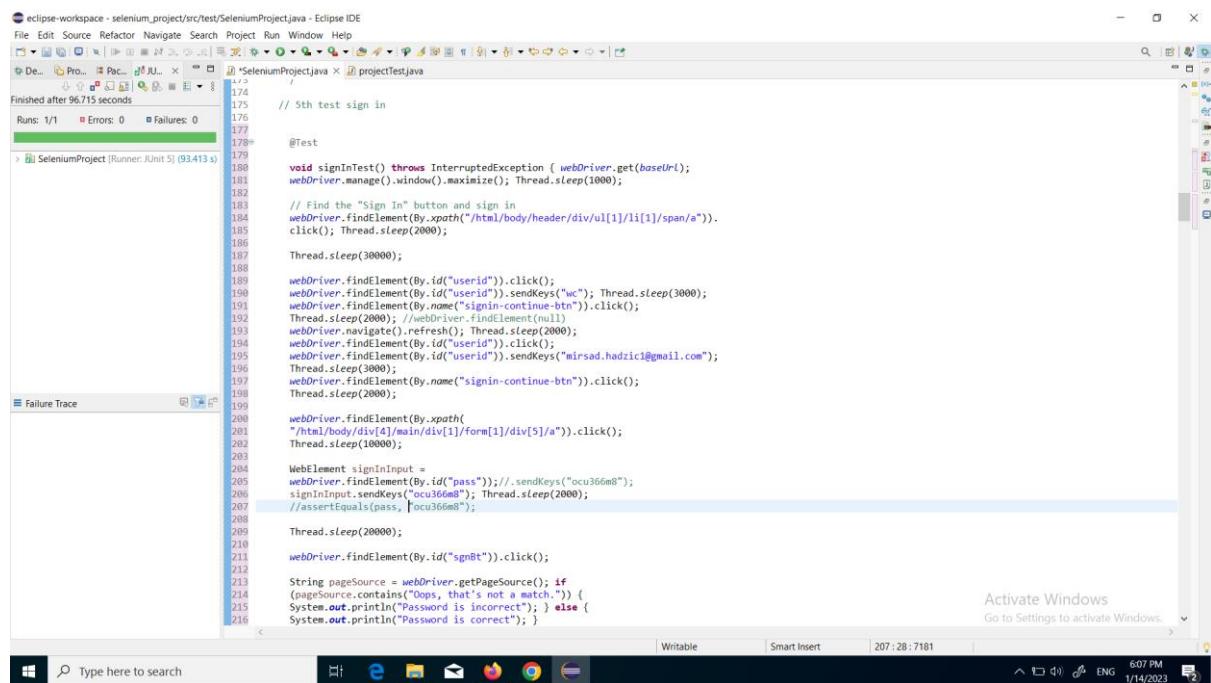

## 2.5. Example Scenario: Test Sign In

When testing the sign-in process on ebay.com, we focused on ensuring that users can successfully sign in to their accounts and that the process is secure and easy to use.

Test Name: Test Sign In				
Description: Check if the user can sign in				
Pre-condition(s):				
<b>Test Steps:</b>  1. Go to the landing page 2. Click on the sign in link 3. Fill out the form 4. If bad input type has been filled in and an error	<b>Test Data:</b>	<b>Expected Result:</b>  When we enter the form, the user will be logged in	<b>Actual Result:</b>  When we enter the form, the user will be logged in	<b>Status:</b>  <b>PASS</b>

occurs, refresh the page,  
else fill out the email form  
and go filling out the  
password  
5. If password is  
incorrect, print some  
error, else print “Password  
Correct”  
6. Get signed in

**Notes:** There are a lot of captcha(s). Maybe you need to enter another email address if this one is banned. It happened a lot of times.

The screenshot shows the Eclipse IDE interface with the following details:

- File Bar:** File, Edit, Source, Refactor, Navigate, Search, Project, Run, Window, Help.
- Project Explorer:** Shows a single project named "SeleniumProject".
- Java Editor:** Displays the content of SeleniumProject.java. The code implements a JUnit test for signing in. It includes imports for WebDriver, By, and WebElement. The test uses WebDriverWait and Thread.sleep to handle UI interactions. It finds the sign-in button, enters a user ID, sends a password, and clicks the sign-in button. It then checks the page source for an error message ("Oops, that's not a match.") and prints "Password is incorrect" or "Password is correct" based on the result.
- Run View:** Shows "Runs: 1/1" with "Errors: 0" and "Failures: 0".
- Failure Trace:** An empty panel.
- Bottom Status Bar:** Shows "Activate Windows", "Go to Settings to activate Windows.", the current time "207:28:7181", and system information like "607 PM", "ENG", and "1/14/2023".

## 2.7. Example Scenario: Test Search

When testing the search option on ebay.com, we focused on ensuring that users can quickly and easily find the products they're looking for and that the search results are accurate and relevant.

<b>Test Name:</b> Test Search				
<b>Description:</b> Check if the search results are correct				
<b>Pre-condition(s):</b>				
<b>Test Steps:</b>	<b>Test Data:</b>	<b>Expected Result:</b>	<b>Actual Result:</b>	<b>Status:</b>
<ol style="list-style-type: none"> <li>1. Go to the landing page</li> <li>2. Look for specific product</li> <li>3. If your search results and search result input contain the product that you looked for, then print “Results are correct”, else print error</li> </ol>		When we write the correct product we are looking for, then print “Results are correct”.	When we write the correct product we are looking for, then print “Results are correct”.	PASS
<b>Notes:</b> eBay often filter search results, which means that, maybe this selector or xpath from “Xiaomi” product that I’ve searched for will be different next time.

## 11. Get back to search results page

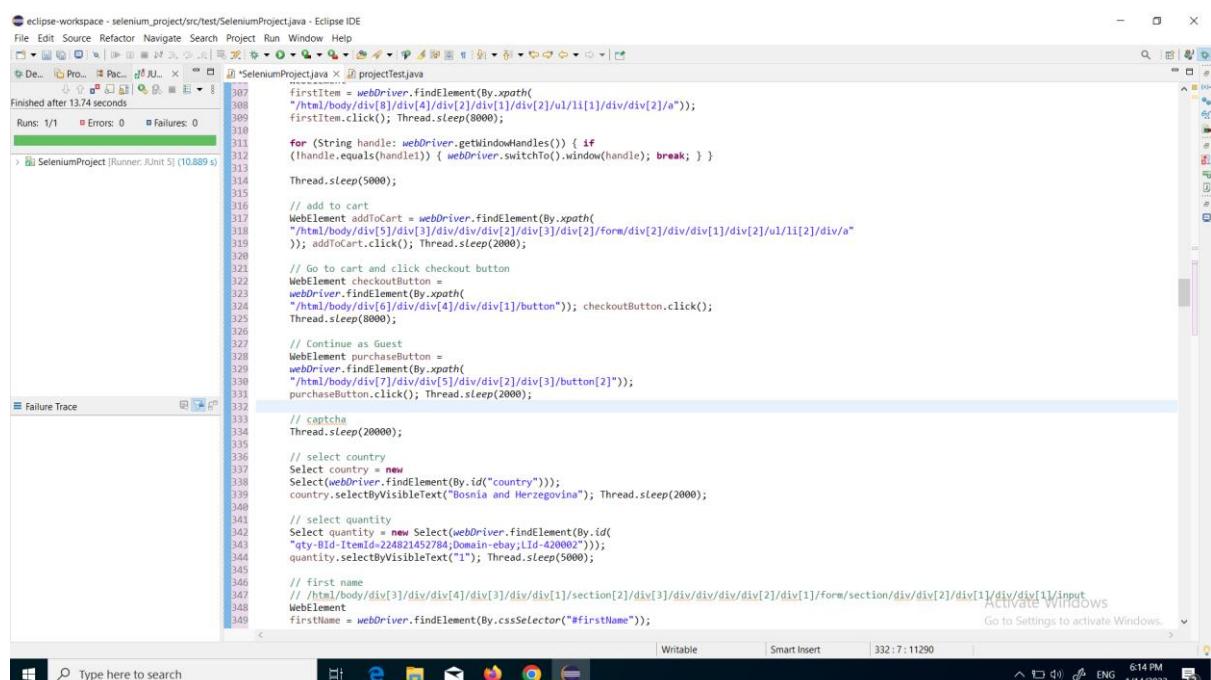

**Notes:** Maybe some cssSelectors or xpath copies will be different by the time you run this test.

The screenshot shows the Eclipse IDE interface. The top menu bar includes File, Edit, Source, Refactor, Navigate, Search, Project, Run, Window, Help. The toolbar has various icons for file operations. The left sidebar shows the project structure with 'SeleniumProject.java' and 'projectTestJava'. The main editor window contains Java code for a Selenium test. The terminal window at the bottom shows the execution results, indicating a successful run with 1/1 tests passed and 0 failures. The status bar at the bottom right shows the date and time as Jan 14, 2023, 6:08:57 PM.

287 // if the "add to cart" and "go to checkout" options are working properly
288
289 @Test
290 void testPurchase() throws InterruptedException {
291     webDriver.get(baseUrl);
292     webDriver.manage().window().maximize();
293     Thread.sleep(1000);
294
295     // Find search box element and click it
296     WebElement searchField =
297         webDriver.findElement(By.xpath(
298             "/html/body/header/table/tbody/tr/td[3]/form/table/tbody/tr/td[1]/div/input[1]"
299         ));
300
301     searchField.sendKeys("xiomi"); Thread.sleep(1000);
302     webDriver.findElement(By.cssSelector("#gh-btn")).click(); Thread.sleep(1000);
303
304     // get the original tab's handle
305     String handle = webDriver.getWindowHandle();
306
307     // click on the first element in search results and open a new tab
308     WebElement firstItem = webDriver.findElement(By.xpath(
309         ".//a[@href='https://www.ebay.com/sch/i.html?_nkw=xiaomi']");
310     firstItem.click(); Thread.sleep(1000);
311
312     // add to cart
313     WebElement addToCart = webDriver.findElement(By.xpath(
314         "//html/body/div[8]/div[4]/div[1]/div[2]/ul/li[1]/div[2]/a"));
315     addToCart.click(); Thread.sleep(2000);
316
317     // Go to cart and click checkout button
318     WebElement checkoutButton =
319         webDriver.findElement(By.xpath(
320             "/html/body/div[6]/div/div[4]/div/div[1]/button")); checkoutButton.click();
321     Thread.sleep(8000);
322
323     // Continue as Guest
324     WebElement purchaseButton =
325         webDriver.findElement(By.xpath(
326             "/html/body/div[7]/div/div[5]/div/div[2]/div[3]/button[2]"));
327     purchaseButton.click(); Thread.sleep(2000);
328
329     // captcha
330     Thread.sleep(20000);
331
332     // select country
333     Select country = new Select(webDriver.findElement(By.id("country")));
334     country.selectByVisibleText("Bosnia and Herzegovina"); Thread.sleep(2000);
335
336     // select quantity
337     Select quantity = new Select(webDriver.findElement(By.id("qty_Bld-Item0=224821452784;Domain=ebay;Id=420002")));
338     quantity.selectByVisibleText("1"); Thread.sleep(5000);
339
340     // first name
341     WebElement firstName =
342         webDriver.findElement(By.cssSelector("#firstName"));
343
344     firstName.sendKeys("John");
345
346     // /html/body/div[3]/div/div[4]/div[3]/div[1]/section[2]/div[3]/div/div[2]/div[1]/form/section/div/div[2]/div[1]/div/input
347
348     // Click the purchase button
349     webDriver.findElement(By.cssSelector("#purchaseButton")).click(); Thread.sleep(10000);
```

This screenshot shows the Eclipse IDE interface, similar to the one above, but with a different set of Java code in the editor. The code appears to be a continuation of the purchase logic, specifically handling the purchase button click and subsequent steps. The terminal window shows the test results again, confirming success with 1/1 tests passed. The status bar at the bottom right shows the date and time as Jan 14, 2023, 6:14:23 PM.

## 2.9. Example Scenario: Test that verifies that “Contact Seller” feature is working correctly

When testing the “Contact Seller” feature on ebay.com, we focused on ensuring that users can easily contact the sellers of the products they’re interested in, and that the process is efficient and secure.

<b>Test Name:</b> Test that verifies that “Contact Seller” feature is working correctly
---

| **Description:** Check to see if the options are working as they should |
| **Pre-condition(s):** |

Test Steps:	Test Data:	Expected Result:	Actual Result:	Status:
1. Go to the landing page 2. Look for specific product 3. Click on the first product 4. Click on “Contact Seller” option 5. Get redirected to sign-in page 6. Sign-in 7. Provide your contact info 8. Get redirected to “Contact Seller” page 9. Click on contact seller feedback 10. Get redirected to contact seller feedback page 11. Provide description and check the checkbox 12. Click on “Done” 13. If my message has been sent, test will pass and will print some statement, else, test will print an error 14. Get back to search results page		When we write the contact seller feedback, then print some true statement.	When we write the contact seller feedback, then print some true statement.	PASS
<b>Notes:</b> Maybe some cssSelectors or xpath copies will be different by the time you run this test. That will cause a problem and test will fail. Note that. It's not our fault.

## 2.10. Example Scenario: Test Discussion Board

When testing the discussion board feature on ebay.com, we focused on ensuring that users can easily participate in discussions, that user can post a public message and that the process is efficient and secure.

Test Name: Test Discussion Board				
Description: Check to see if we can start a public discussion				
Pre-condition(s):				
<b>Test Steps:</b>	<b>Test Data:</b>	<b>Expected Result:</b>	<b>Actual Result:</b>	<b>Status:</b>
1. Go to the landing page 2. Scroll down 3. Click on “Discussion Board” 4. Get sent to that page 5. Click on the button called “Start a conversation” 6. Sign-in 7. Provide email and password 8. Click on sign-in 9. Get redirected to “Discussions” page 10. Click on “Start a conversation” 11. Get redirected to another page		If page source contains the comment that we've sent, then test passed.  Comment, really, was sent.	If page source contains the comment (subject) that we've sent, then test passed.  Comment, really, was sent.	PASS

## 2.11. Example Scenario: Test that verifies that “Buy it now” feature is working correctly, testing the purchase page

We tested “Buy it now” button to see if the purchase page will appear. We tested the purchase page.

Test Name: Test that verifies that “Buy it now” feature is working correctly, testing purchase page				
Description: Check to see if purchase page is displayed				
Pre-condition(s):				
<b>Test Steps:</b> <ol style="list-style-type: none"><li>1. Go to the landing page</li><li>2. Look for specific product in search bar, “Xiaomi” in our case</li><li>3. Click on the product</li><li>4. Click on “Buy It Now” Button</li><li>5. When pop-up appears, click on “Check out as guest”</li><li>6. Get redirected to purchase page</li><li>7. If there’s a button with the name “Confirm and pay” on it, purchase page is displayed, else not</li></ol>	<b>Test Data:</b>	<b>Expected Result:</b> <p>If page source contains a button with the name “Confirm and pay” on it, purchase page is displayed.</p>	<b>Actual Result:</b> <p>If page source contains a button with the name “Confirm and pay” on it, purchase page is displayed.</p>	<b>Status:</b> <p>PASS</p>
<b>Notes:</b> Maybe some cssSelectors or xpath copies will be different by the time you run this test. That will cause a problem and test will fail. Note that. It’s not our fault.				

```

53 // 12th test, "Add to wish list"
54
```

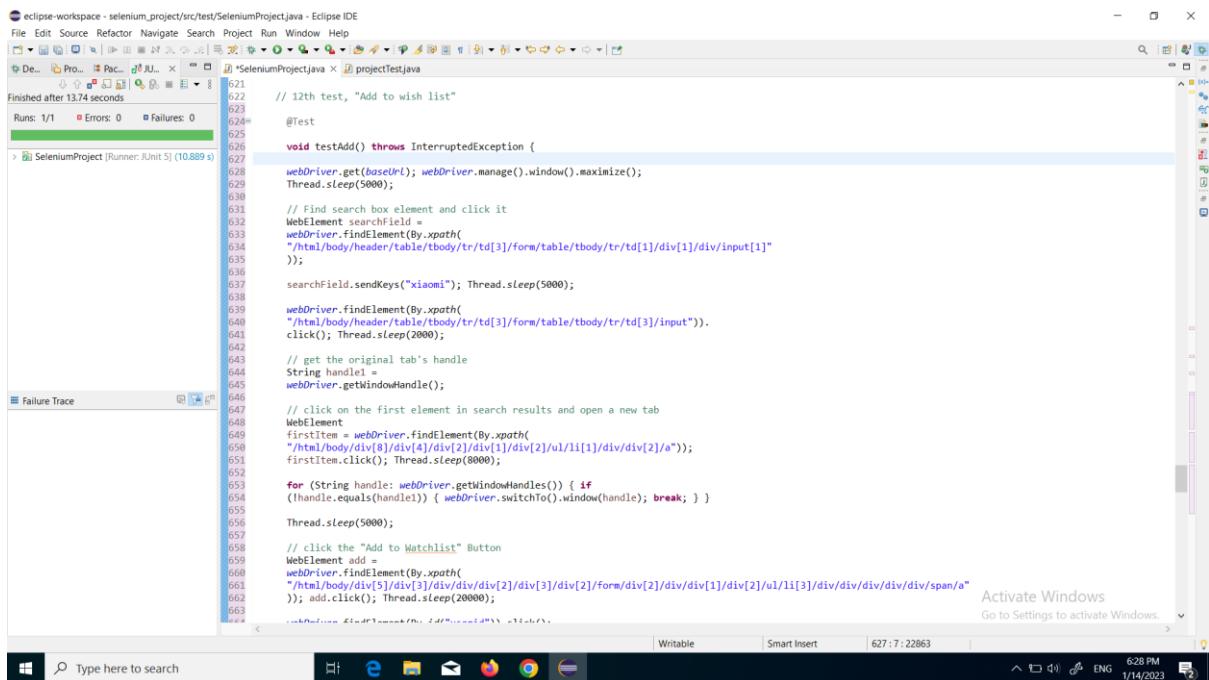

## 2.12. Example Scenario: Test “Add to wish list”

When testing the “Add to Wish List” feature on ebay.com, we focused on ensuring that users can easily save items they are interested in for later, and that the process is efficient and secure.

<b>Test Name:</b> Test “Add to wish list”
<b>Description:</b> Check to see if we added the product to wish list
<b>Pre-condition(s):</b>

Test Steps:	Test Data:	Expected Result:	Actual Result:	Status:
<p>1. Go to the landing page      2. Look for specific product in search bar, "Xiaomi" in our case      3. Click on the product      4. Click on "Add to Watchlist" Button      5. Get redirected to sign-in page      6. Provide email and password      7. Sign-in      8. Get redirected to page with our "Xiaomi"      9. Click on "Add to Watchlist" Button      10. If there's a "Watch list" name on that page, it means that item was added to the wish list, else not</p>		If there's a "Watch list" name on that page, it means that item was added to the wish list.	If there's a "Watch list" name on that page, it means that item was added to the wish list.	PASS

**Notes:** Maybe some cssSelectors or xpath copies will be different by the time you run this test. That will cause a problem and test will fail. Note that. It's not our fault.

## 2.16. Example Scenario: Test advanced options

We tested the advanced options in Selenium, after that the program printed out the domain name, current URL and page title.

Test Name: Test advanced options				
Description: Check to see these unique options				
Pre-condition(s):				
Test Steps:	Test Data:	Expected Result:	Actual Result:	Status:

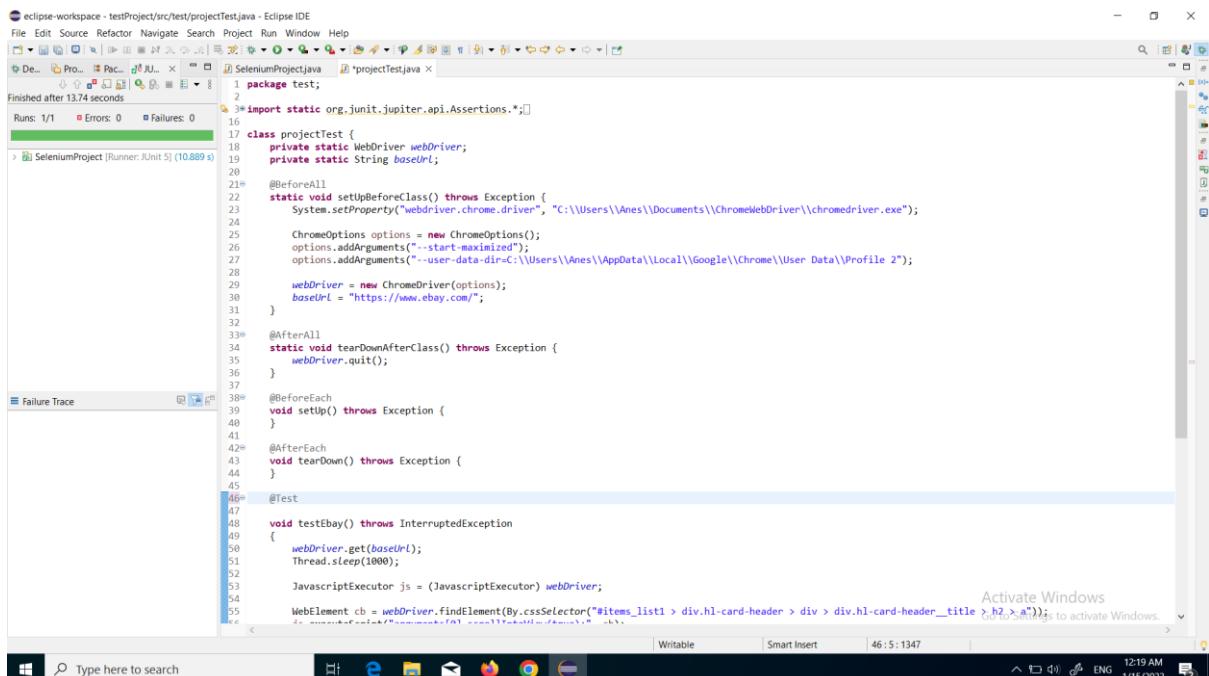

1. Go to the landing page
2. Scroll down to “Daily Deals”
3. Program prints out the domain name, URL and title.

Program prints out these options.

Program prints out these options.

PASS

### 3. Conclusion

#### 3.1. Testing Summary

Testing Tool	Total Tests	Passed Tests	Failed Tests
When creating the project, the following technologies were employed: Selenium, a widely used open-source framework for automating web browsers, for the automation of web-based application testing. JUnit, a widely used Java-based framework for writing and running unit tests, for the creation and execution of test cases. Eclipse, a widely used integrated development environment (IDE) for Java programming, as the primary development environment. The programming language used in the project was Java, a widely used, class-based, object-oriented programming language, for the implementation of the test automation scripts.	16	# Test URL # Test Business Account # Test Personal Account # Test Help & Contact Link/Button # Test Sign In # Test Title # Test Search # Test Purchase Option, “add to cart” and “go to checkout” options # Test that verifies that “Contact Seller” feature is working correctly # Test Discussion Board # Test that verifies that “Buy it now” feature is working correctly, testing purchase page # Test “Add to wish list” # Test that verifies “Remove” feature # Test that checks if the message page is displayed correctly # Test that deletes messages # Test advanced options	None

### **3.2. Final Thoughts**

In conclusion, the testing project we did was focused on ensuring the functionality, security and usability of the eBay website. We used Selenium and JUnit as tools for automating the testing process, and Java as the programming language for developing the test cases. Through a variety of testing methods, we were able to validate the behavior of the website's features such as Sign in, Search, Add to cart, Buy it now, Add to wish list, Contact seller, Discussion board, and message page etc. This project helped to ensure that the eBay website is working as intended and that it provides a positive user experience. With the thorough testing we've done, we found no mistakes whatsoever. Hard experience's that we had are with captcha and eBay filtering those search results, so every time we want to click on the first product from the search results, results change. Other than that, we found no mistakes. eBay really is an amazing website.
